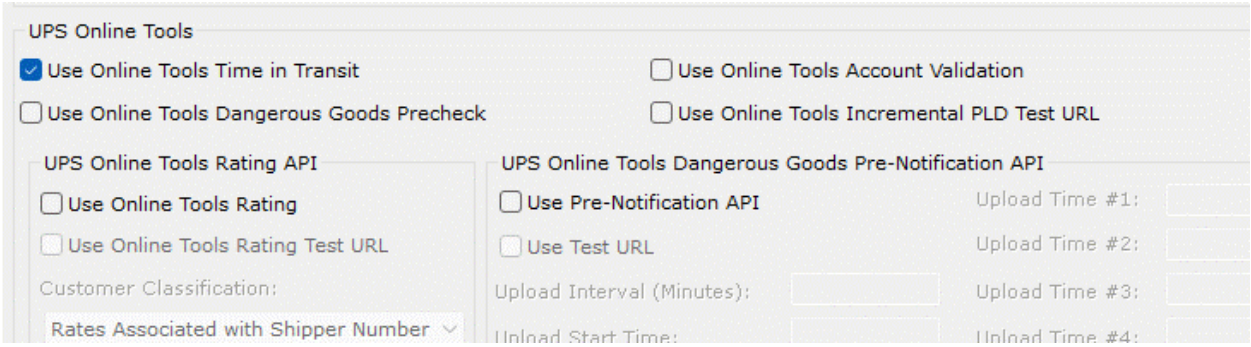
OAuth for PMC

While reviewing the log file for one of the customers, we found an error in the UPS Ground service rate call: “UPS Online Tools OAuth Authorization Code has not been set.”

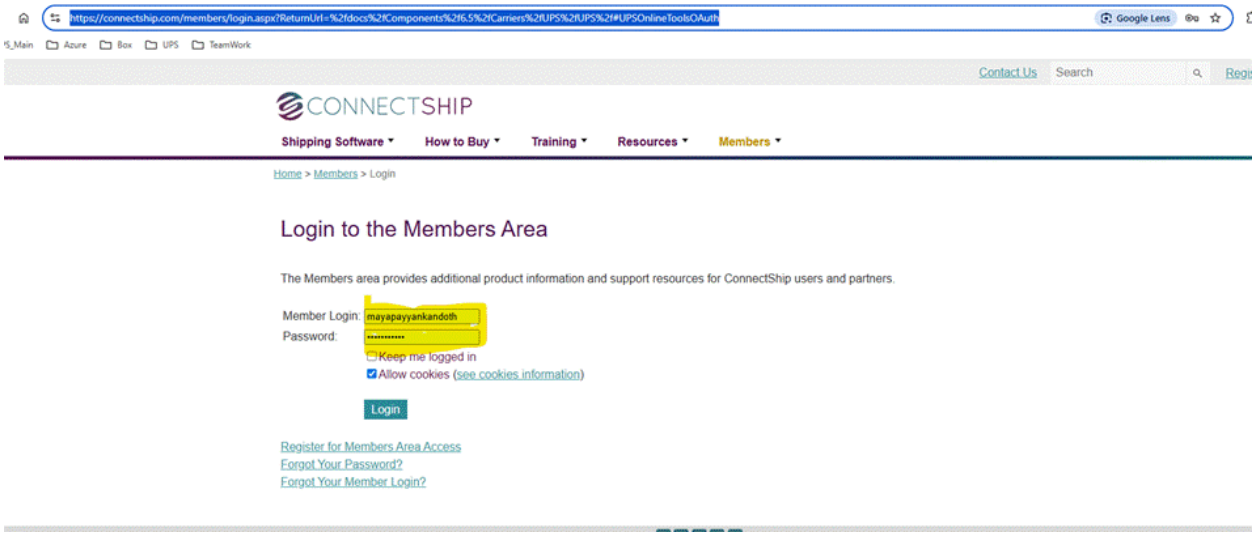
In the latest system ConnectShip need OAuth Code to call the API for Time in Transit.



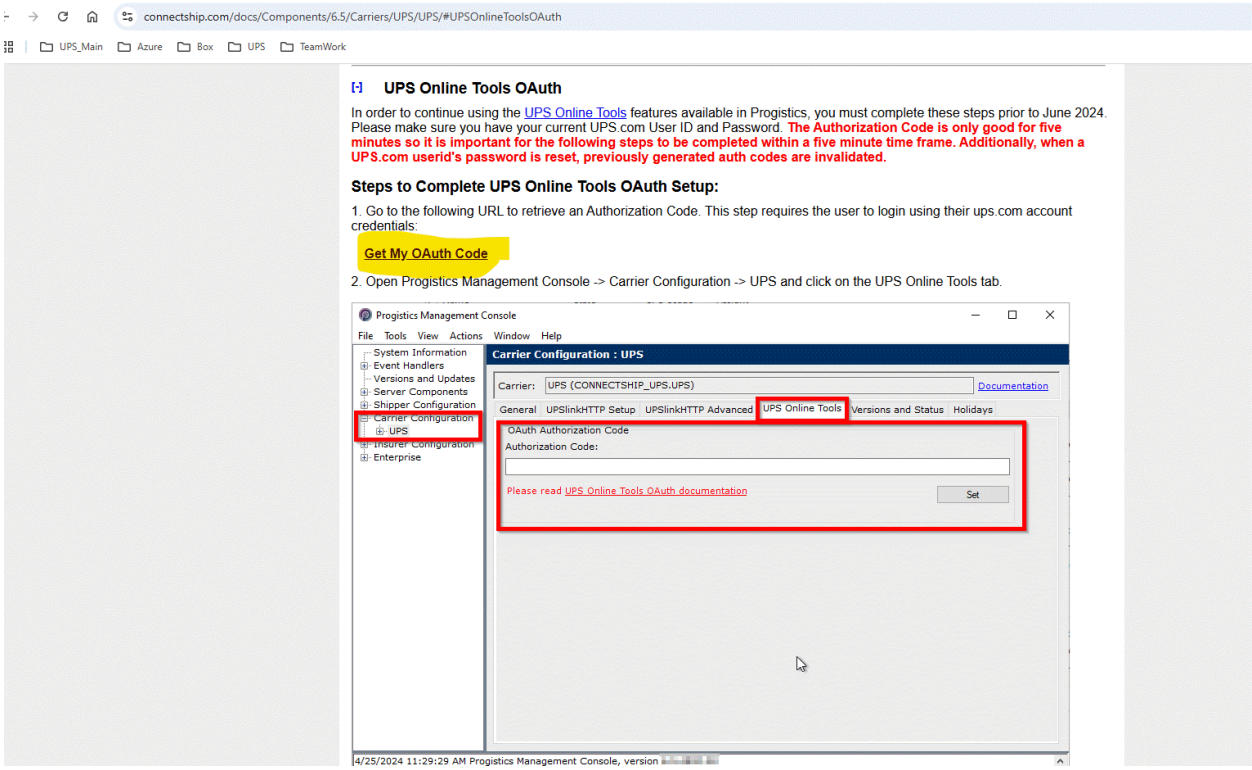
<u>Steps to get the code</u>

1) **Click on the link below and login to Connectship using Stago connectship Member Login and password.**

https://connectship.com/members/login.aspx?ReturnUrl=%2fdocs%2fComponents%2f6.5%2fCarriers%2fUPS%2fUPS%2f#UPSOnlineToolsOAuth

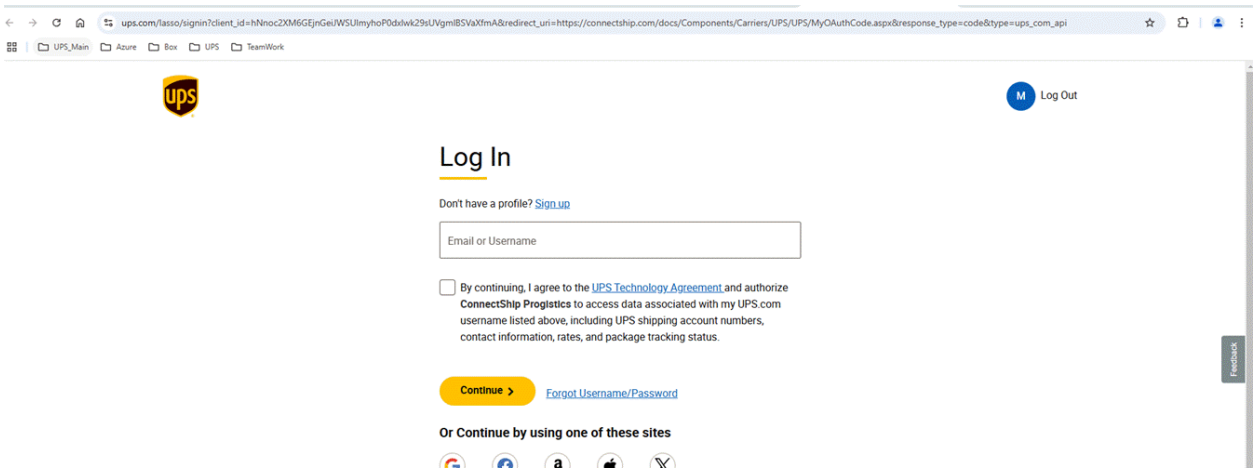


2) Go to "*UPS Online Tools OAuth*" section and click on "*Get My OAuth Code*"

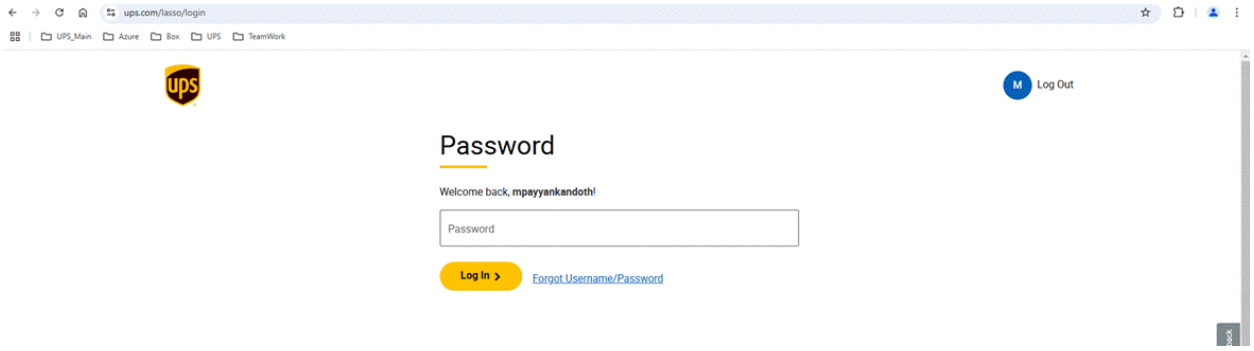


3) **Enter Stago UPS Account name or email id and check the agreement checkbox and continue.**

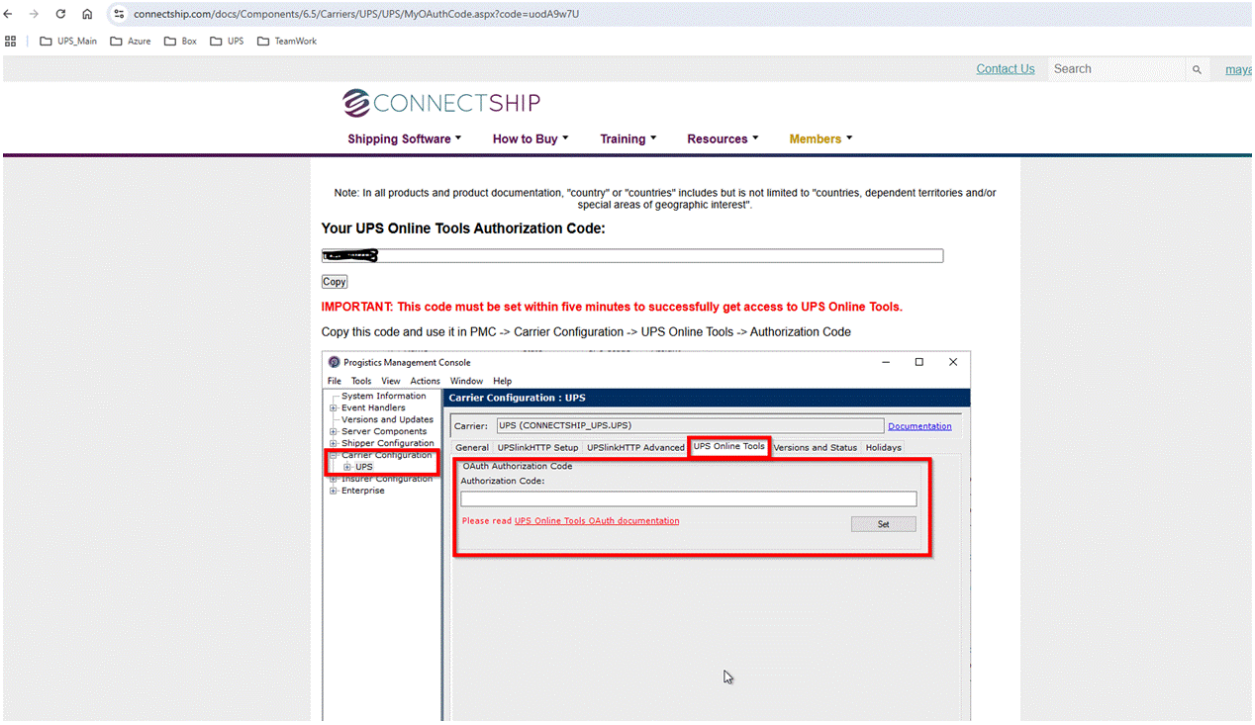
Note: Make sure to use the same credentials that were used to create the legacy access key originally used to configure the Online Tools in the UPS Component



4) **Enter the Password and Log In**



5) **Copy the OAuth Code displayed in the textbox and send us or you can got to UAT server, open Progistics Management Console and paste the code in the box shown below and click on Set button.**



PRODUCTION

The initial set up is through the test environment- it is the creation of the credentials, the association of account numbers to credentials, and establishing the customer in the UPS Online Tools system.

The Production configuration looks different because it is the acceptance of the terms and conditions that are binding - it is the understanding that the customer is now responsible for packages shipped through the accounts affiliated with this UPS Online Tools /UPS.com account. And it is entering the credentials of all the details established in the test environment.

Production looks different because it becomes real shipments that the customer is responsible for at that point.

In the test environment, the shipments are not legitimate charges, the accounts are not commissioned for production usage in the same way.
