Paperless Rule

What this does is regulates when the Commercial Invoice document prints or doesn't print. Most origin/destination combinations support the UPS Paperless Label. For those scenarios, a hardcopy of the commercial invoice isn't needed as the commodity data is contained in the "paperless label" (label at the right below). The PDF417 barcode contains all of that information.

However, some countries do not support the UPS Paperless label. For those, a hardcopy of the commercial invoice is needed. The SBR code is used to manage that.

COMMERCIAL INVOICE

These items are controlled by the U.S. government and authorized for export only to the country of ultimate destination for use by the ultimate consignee or end-user(s) herein identified. They may not be resold, transferred, or otherwise disposed of, to any other country or to any person other than the authorized ultimate consignee or end-user(s), either in their original form or after being incorporated into other items, without first obtaining approval from the U.S. government or as otherwise authorized by U.S. law and regulations.

For testing, you can use a US to Canada shipment to test Paperless as Canada supports the UPS Paperless Label. You can use a US to Brazil shipment to test the commercial invoice as Brazil does not support paperless. See examples below.
